

```
<?php
```

```
echo "Bienvenido A su Software De Confianza"."\\n";
```

```
$n = readline("Por Favor Ingresa Un Numero Para Su Respectiva Suma: ");
```

```
$suma=0;
```

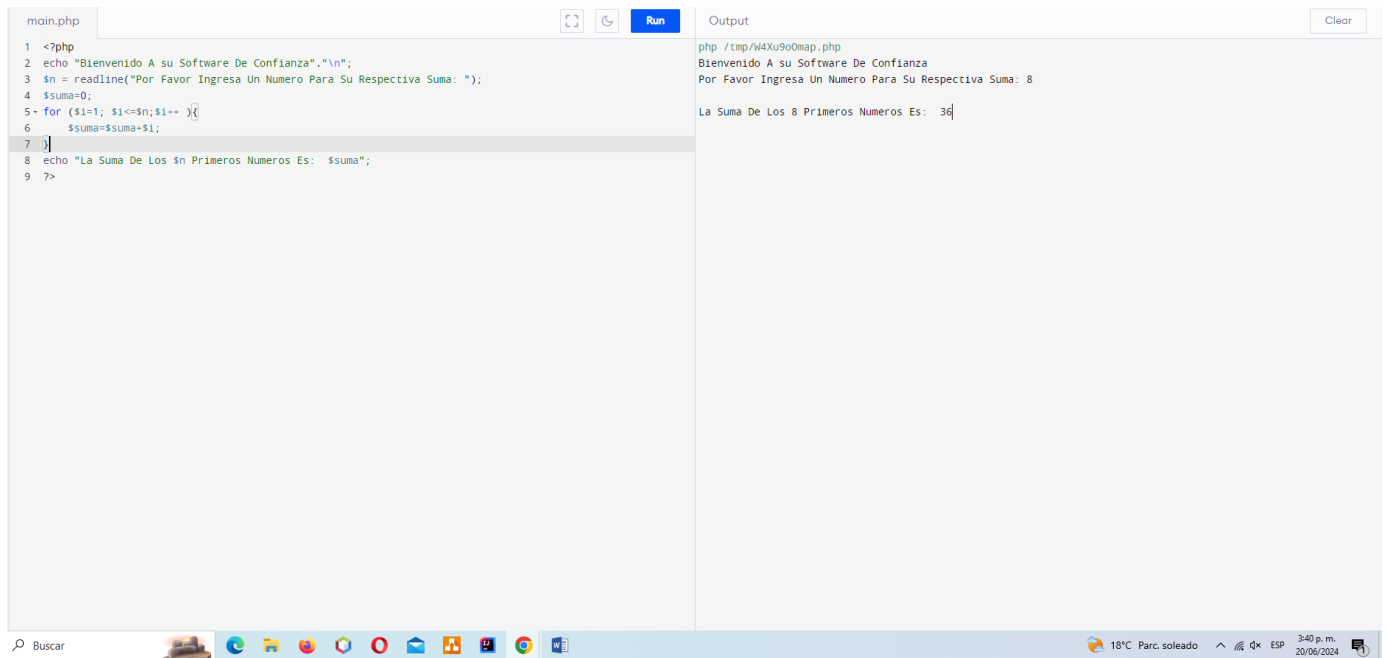

```
for ($i=1; $i<=$n;$i++){
```

```
    $suma=$suma+$i;
```

```
}
```

```
echo "La Suma De Los $n Primeros Numeros Es: $suma";
```

```
?>
```

The screenshot shows a web-based PHP editor interface. On the left, a text area contains PHP code for a program that calculates the sum of the first n natural numbers. The code includes a welcome message, a prompt for input, a loop to calculate the sum, and an output statement. The file is named 'main.php'. On the right, an 'Output' window displays the execution results: a welcome message, a prompt, the input '8', and the calculated sum '36'. The interface includes a 'Run' button and a 'Clear' button. At the bottom, a Windows taskbar is visible with various application icons and system information.

```
main.php
1 <?php
2 echo "Bienvenido A su Software De Confianza"."\\n";
3 $n = readline("Por Favor Ingresa Un Numero Para Su Respectiva Suma: ");
4 $suma=0;
5 for ($i=1; $i<=$n;$i++){
6     $suma=$suma+$i;
7 }
8 echo "La Suma De Los $n Primeros Numeros Es: $suma";
9 ?>
```

Output

```
php /tmp/n44Xu9o0map.php
Bienvenido A su Software De Confianza
Por Favor Ingresa Un Numero Para Su Respectiva Suma: 8

La Suma De Los 8 Primeros Numeros Es: 36
```

```
<?php
```

```
echo "Bienvenido A su Software De Confianza"."\\n";
```

```
$n = readline("Por Favor Ingresa Un Numero Para Su Respectiva Suma: ");
```

```
$suma=0;
```

```
$i=1;
```

```
while($i<=$n){
```

```
    $suma+=$i;
```

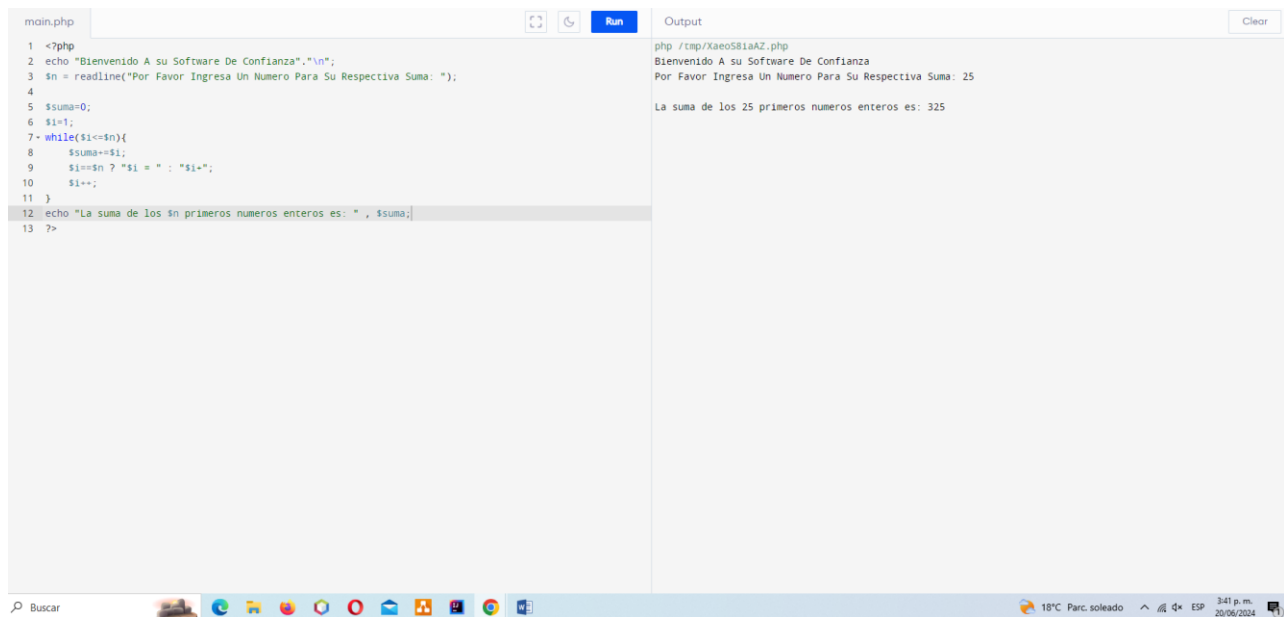

```
    $i==$n ? "$i = " : "$i+";
```

```
    $i++;
```

```
}
```

```
echo "La suma de los $n primeros numeros enteros es: " , $suma;
```

```
?>
```

The screenshot shows a web IDE interface with a file named 'main.php' and an 'Output' window. The code in 'main.php' is a PHP script that calculates the sum of the first 25 natural numbers. The output window shows the execution results: a welcome message, a prompt for a number (25), and the final sum (325).

```
main.php 1 <?php
2 echo "Bienvenido A su Software De Confianza"."\\n";
3 $n = readline("Por Favor Ingresa Un Numero Para Su Respectiva Suma: ");
4
5 $suma=0;
6 $i=1;
7 while($i<=$n){
8     $suma+=$i;
9     $i==$n ? "$i = " : "$i+";
10    $i++;
11 }
12 echo "La suma de los $n primeros numeros enteros es: " , $suma;
13 ?>
```

Output

```
php /tmp/Xae0S81aAZ.php
Bienvenido A su Software De Confianza
Por Favor Ingresa Un Numero Para Su Respectiva Suma: 25

La suma de los 25 primeros numeros enteros es: 325

```

```
    }
```

```
}
```

```
?>
```

The screenshot shows a web IDE interface with a file named 'main.php'. The code in the editor is a PHP script that prints a welcome message, reads two numbers from the user, and then prints even and odd numbers within a specified range. The output panel on the right shows the execution results, including the user input '0' and '21', and the printed lists of even and odd numbers.

```
1 <?php
2 echo "Bienvenido A su Software De Confianza"."\\n";
3 $Inicial = readline("por favor ingresa un numero: ");
4 $Final = readline("por favor ingresa un numero: ");
5
6 echo "Números pares en el rango de $Inicial a $Final:\\n";
7 for ($i = $Inicial; $i <= $Final; $i++) {
8     if ($i % 2 == 0) {
9         echo $i . " ";
10    }
11 }
12 echo "\\n\\nNúmeros impares en el rango de $Inicial a $Final:\\n";
13 for ($i = $Inicial; $i <= $Final; $i++) {
14     if ($i % 2 != 0) {
15         echo $i . " ";
16     }
17 }
18
19
20 ?>
```

Output

```
php /tmp/Sciciup8tn6.php
Bienvenido A su Software De Confianza
por favor ingresa un numero: 0
por favor ingresa un numero: 21
Números pares en el rango de 0 a 21:
0 2 4 6 8 10 12 14 16 18 20
Números impares en el rango de 0 a 21:
1 3 5 7 9 11 13 15 17 19 21
```
